

AGA KHAN MUSEUM

CASE STUDY

The Company:

The Aga Khan Museum is a museum of Islamic art, Iranian art, and Muslim culture located in Toronto, Ontario, Canada. The museum houses more than 1,000 rare objects including artifacts from the private collections of His Highness the Aga Khan.

The Challenge:

The challenges faced by the Agha Khan Museum's existing ERP system included scattered data in multiple silos, reliance on excel for reporting, and an excessive amount of time spent on reporting.

The Solution:

WebSan moved Aga Khan from on-premises to Dynamics 365 Business Central within a 4-week project cycle. This allowed Aga Khan to simplify their procurement process making it entirely digital end-to-end. WebSan was also able to model an entire budgeting suite to meet the requirements unique to the museum's needs. Lastly, WebSan created custom Power BI Dashboards saving staff a significant amount of time on reporting. Aga Khan Museums' move to the cloud further ensured secure data security and regular updates to the ERP system being part of Microsoft's ecosystem.

“

WebSan was exceptional at creating Power BI Dashboards for us. This allowed our senior management team to look at these dashboards and know how much available budget and what the spend looks like so that we can effectively manage our cash flow which is key for our business.
