

CASE STUDY

The Company:

Bordner Home Improvement is an industry leader providing superior products, services, and installations for your home or business. Bordner has gained more than 80,000 satisfied customers in the Kansas City area since 1987.

The Challenge:

Bordner Home Improvement wanted to move off their GP Server and transition to the cloud.

The Solution:

WebSan made the conversion from our server version of GP to their cloud servers very easy and were available the entire time. Not only do we save money by not having to maintain our own equipment, but we also do not have to pay for a backup solution. We do not have to worry about connectivity for backup solutions or even review the success or failure of backups.

“

Since WebSan is in the cloud, we have remote users and do not have to maintain our own Domain Controllers or VPN access. I estimate that we are saving over \$1000 per month. This includes not having to buy, configure, and maintain our own equipment as well as my time to oversee that equipment.

”
